

# Birding Drives

Our drives will take you to these remote birding "hotspots":

- Arrowwood National Wildlife Refuge
- Chase Lake National Wildlife Refuge
- Lake Juanita
- Missouri Coteau Region
- Edward R. Brigham III Alkali Lake Sanctuary
- Jamestown Reservoir
- Jamestown Sewage Lagoons
- James River Valley
- Hawk's Nest Ridge
- Pipestem Reservoir

Southeastern North Dakota is characterized by sweeping croplands and grasslands, punctuated by thousands of prairie marshes. Planted tree claims and riparian woodlands add to the diversity of habitats. These varied habitats support a diverse avian community encompassing approximately 320 species. You should encounter a great diversity and density of waterfowl, shorebirds, and blackbirds. The area also hosts a dazzling array of breeding sparrows. Several highly-sought species of birds might be found in this region, including Ferruginous Hawk, Gray Partridge, Sharp-tailed Grouse, Piping Plover, Sprague's Pipit, Baird's Sparrow, LeConte's Sparrow, Nelson's Sharp-tailed Sparrow, and Chestnut-collared Longspur.
